EXPERTS IN THE DEVELOPMENT AND MANUFACTURE OF RUBBER, RUBBERMETAL AND SILICONE COMPONENTS FOR THE AUTOMOTIVE SECTOR

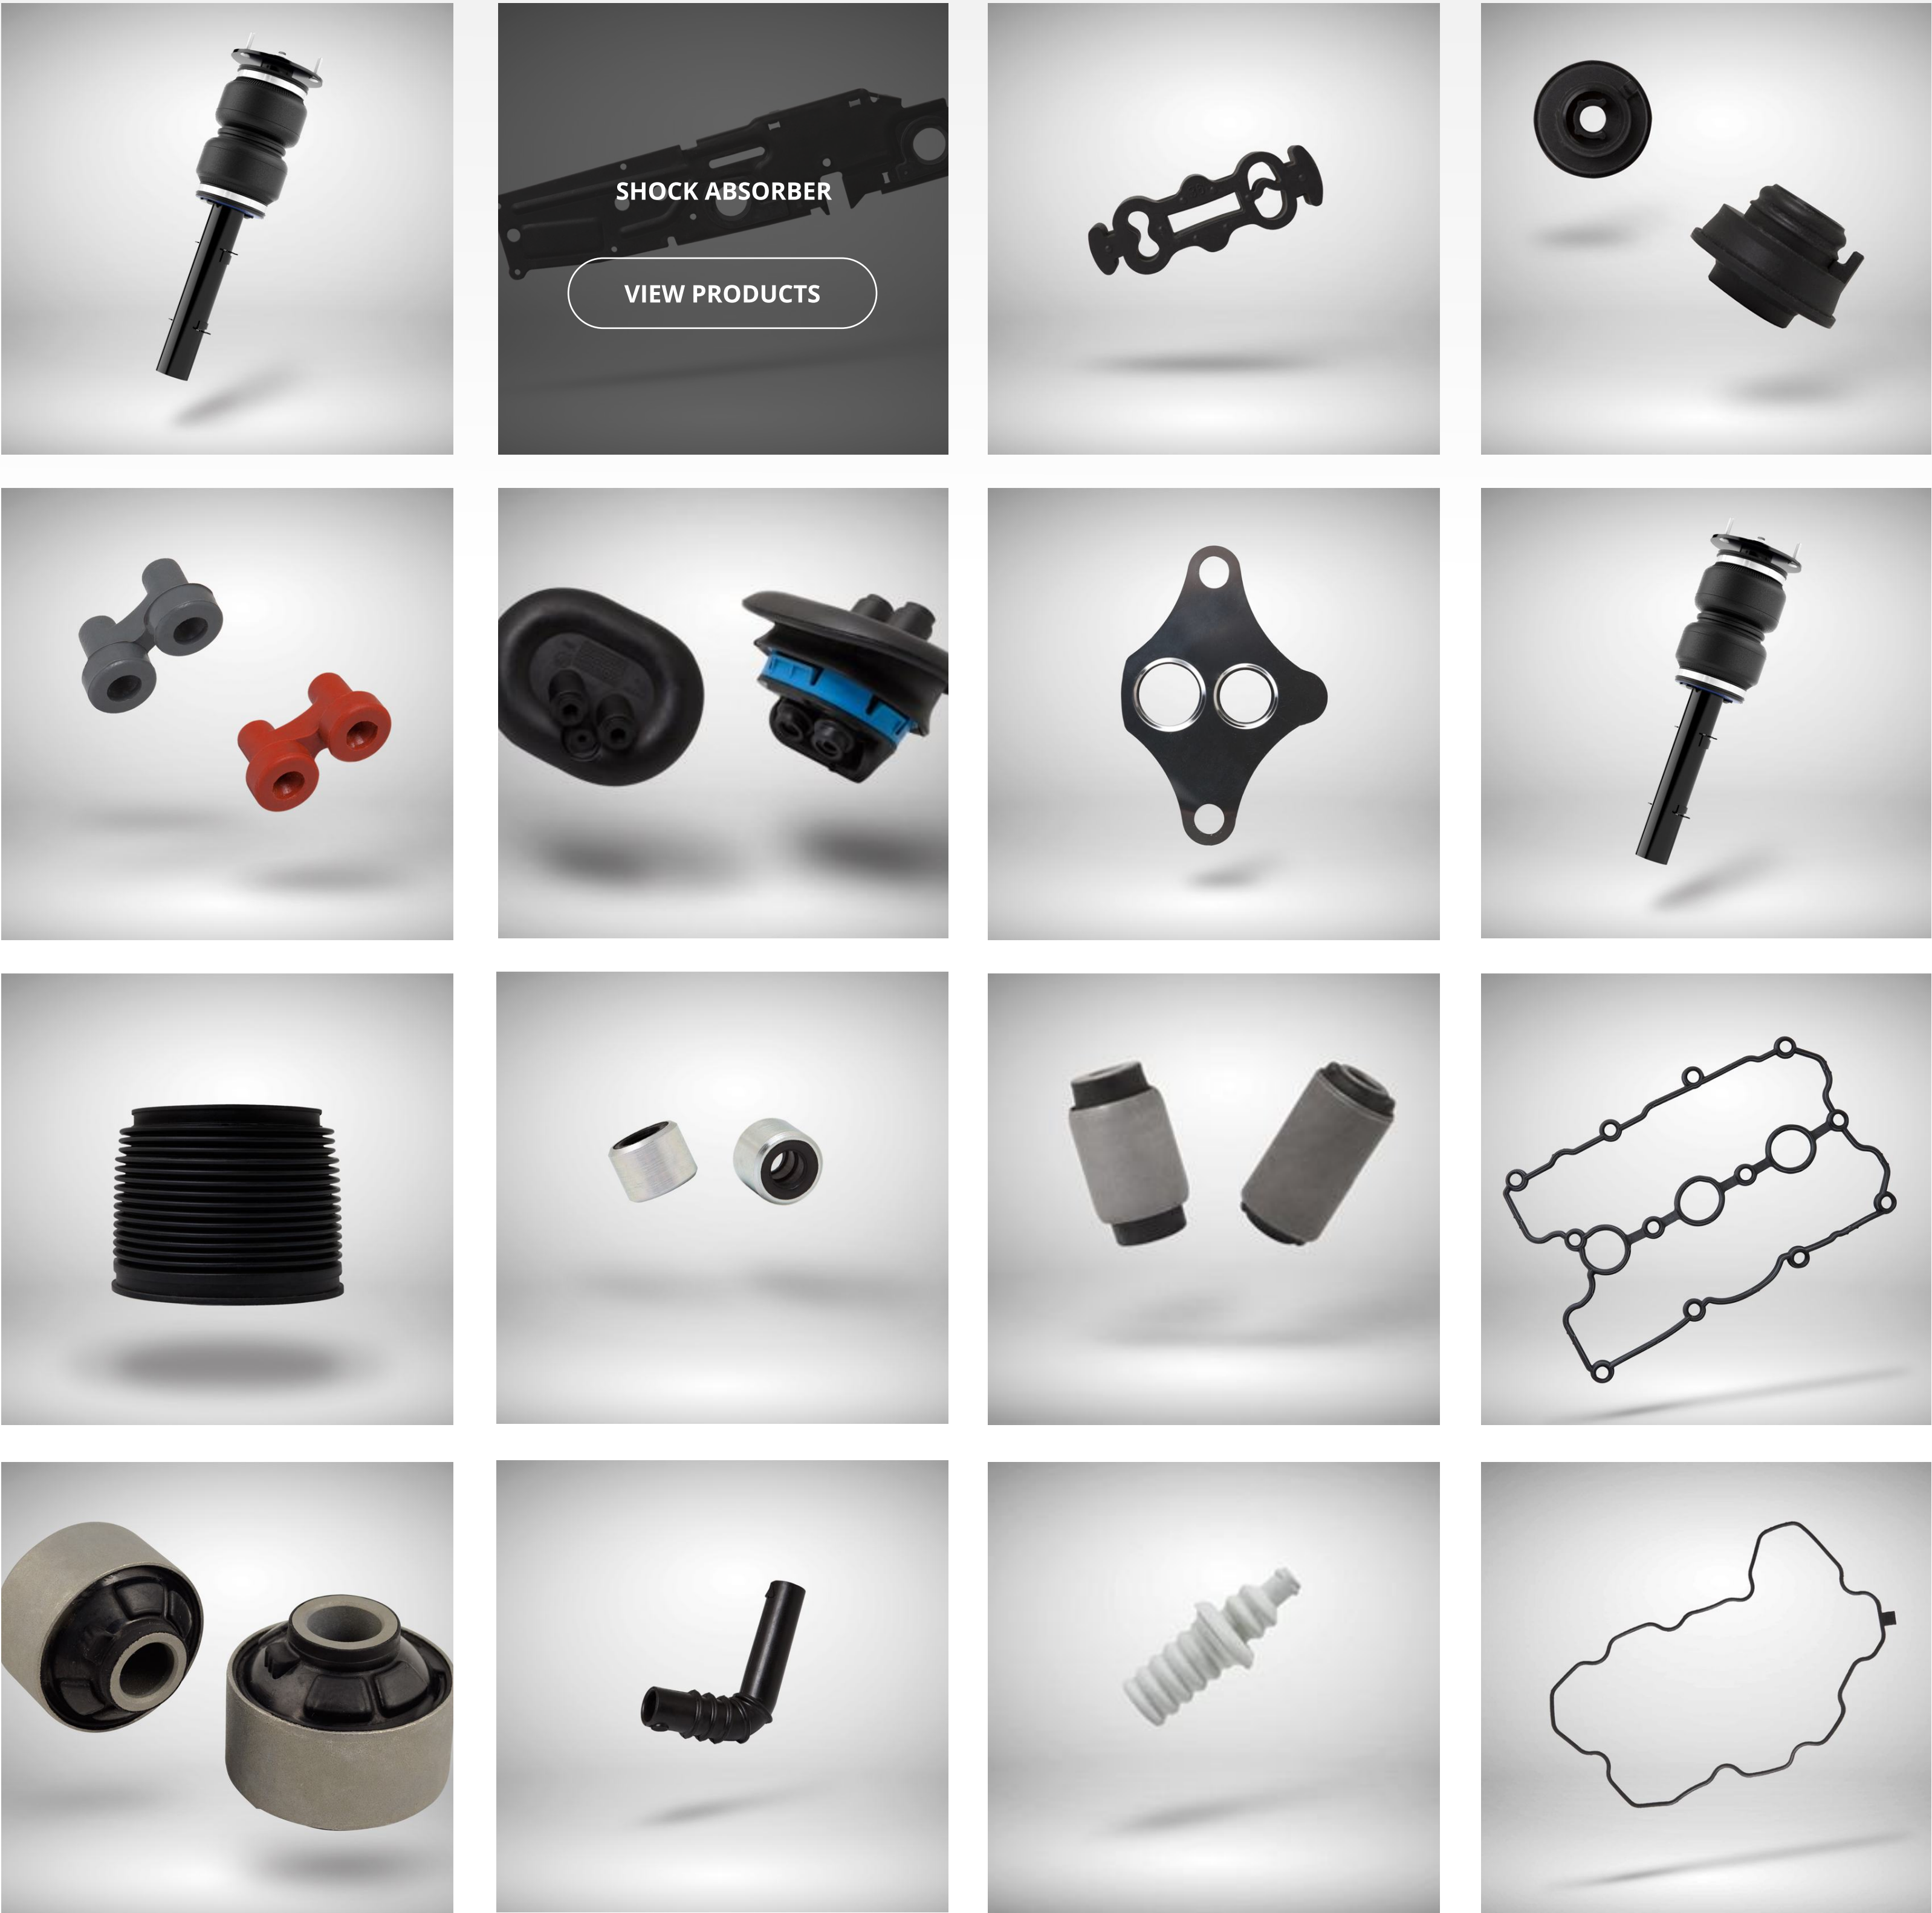

The products we develop and manufacture have evolved as the market has demanded more competitive components with higher performance, a challenges that **KTE-MAGOM GmbH** has repeatedly solved with complete competence. Our manufacturing processes employ cutting latest stat of the art technology to satisfy customers’ requirement. **KTE-MAGOM GmbH** has a recognised history of producing rubber and rubbermetal components for many number of applications.

This range from sealings, shock-absorbers and cover gaskets, using such complex materials as ACM, and their manufacture constitutes one of **KTE-MAGOM GmbH** most distinguishing activities. Engine tubes and hoses are also to be found among our leading products, made from ECO, AEM (Vamac) or HNBR. **KTE-MAGOM GmbH** ensures a fast, efficient service and a flexible production programme aimed at making us a reliable and trusted partner to our customers.

Prior to choosing a specific type of rubber for a product it is extremely important to know the mechanical, chemical and thermodynamic applications to which the product will be subjected. This table shows the characteristics of each type of material. In any case, **KTE-MAGOM GmbH** will advise you on the best choice for your particular need, and where necessary can prepare specific formulations to obtain the best results.
